 *UL Listings Available!

Reconditioning Process

We ensure that all of our Reconditioned Substations are methodically tested and restored - backed by our 3-Year Warranty.

Our process includes, but not limited to:

- TTR and Megger Testing
- HV / LV Winding Resistance Testing
- Phase Polarity Testing
- Impedance Testing
- No Load and Load Loss Testing
- Oil Dielectric Sampling
- Pressure Testing
- DOBLE Testing (upon request)
- Gasket Inspection / Replacement
- Pipe fittings are resealed
- All components are inspected, tested and replaced, if needed
- Fluids tested / processed or replaced
- Finished with a high-quality industrial paint. Custom colors **are** available
- QC performs final test before deployment
